

To customers installing CD-1A to VF80

When installing Model CD-1A into VF80, the bracket attached to the bottom side of CD-1A, the blank panel and 2 x screws shown in the drawing below are not required to use. Refer to the page 135 - 136 of VF80 Owner's Manual for removing the bracket and installing Model CD-1A.

<IMPORTANT! Caution when removing the bracket from CD-1A>

After removing the bracket indicated by the arrow in the above drawing by loosening 2 x screws, **DO NOT** put them back to the CD-1A holes where they were originally mounted. Otherwise, the tip of the screw touches the tray internally to disable tray eject.

<Correction on VF80 owner's manual>

There is a false description in the installing procedure (4) on the page 135 of VF80 owner's manual. Refer to the following correction.

<CORRECT installing procedure No. 4>

Using the screw (1 pc.) which was used to tighten the blank panel to VF80, fix CD-1A to the VF80 chassis.

When tightening the screw, do not apply an excessive force.
